BUSINESS UPDATE

Electrometals Technologies is pleased to announce that the company has been contracted to supply an EMEW® electrowinning plant worth \$336,000 to a customer in Chile, the first sale in that country for several years, for delivery by the end of the first quarter 2008.

While this is for quite a small copper plating plant, it is for a new application, to recover copper cathode from a bleed stream at a heap leach copper mine, where the SX-EW process is used to recover acid-soluble copper.

Based upon successful pilot-scale test work, using EMEW® in this application will increase the copper production and enhance the output at the mine, for a relatively small capital investment. Our customer has made provision in this EMEW® plant to allow expansion of the plant, after an initial period of satisfactory operation of this stage 1 installation.
