The Manager  
Company Announcements Office  
Australian Stock Exchange

## BUSINESS UPDATE

The directors of Electrometals Technologies are pleased to announce that the company has been contracted to supply an EMEW® electrowinning facility to a customer in the United States, to be used for the production of copper cathode from a copper refinery bleed stream.

The total amount of the contract is A\$3,800,000, for progressive delivery in the second half of 2007, commencing in the third quarter. A substantial deposit has been received.

As outlined on page 3 of the 2005 annual report, the production of high-quality copper cathode from refinery bleed streams contaminated with impurities has been defined by Electrometals as one of the key areas to promote the benefits of our EMEW® electrowinning technology. This is the first sale for this application and it is hoped it will provide a springboard for additional sales.

Yours faithfully,

R.E. KEEVERS  
Chairman & CEO
